## Workshop:

### Problem

We need a solution to increase the level of management in their clients. The system needs to compare expiration time of some products, help to collect and distribute profits, quantity of products, register clients to give them a better service or promotions and assign shifts according to customer taste or availability

### Overview

The solution that is proposed is a software that helps to quickly manage your premises in a centralized manner and if the client requires it, that their appointments are later made remotely.

### Background

In progress :D.
